***Allowable Subject Matter***

1. Claims 1-3 and 5 –26 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. As to claim 1, the prior arts of record do not anticipate or render obvious to one skilled in the art a multi-domain liquid crystal display comprising a pixel electrode on the second substrate, a first side electrode along a periphery of the pixel electrode, a second side electrode formed diagonally on the pixel electrode and first and second dielectric frames corresponding to sides of the second side electrode formed on the first substrate.
4. As to claims 7 and 22, the prior arts of record do not anticipate or render obvious to one skilled in the art a multi-domain liquid crystal display or a method of manufacturing the same comprising various elements as claimed, more specifically the first side electrode being electrically connected to the second side electrode in combination with all other recited limitations.
5. As to claim 14, the prior arts of record do not anticipate or render obvious to one skilled in the art a multi-domain liquid crystal display comprising a first side electrode on the first substrate, a second side electrode on the first substrate at a boundary between the two liquid crystal domains, a pixel electrode on the first substrate, the second side electrode traversing the pixel electrode and at least one dielectric structure on the second substrate parallel to the second side electrode and corresponding to sides of the second side electrode.

6. USPAT 6,462,798 (Kim), US 2001/0019389 (Lee) and the newly cited reference US 2001/0019391 (Kim et al.) (All assigned to the common assignee) disclose a multi-domain liquid crystal display having pixel electrodes, common auxiliary electrodes and dielectric frames. However, Kim, Lee or Kim et al., fail to teach or suggest alone or in combination a second side electrode that is formed diagonally on the pixel electrode (for claim 14: the second side electrode being formed at a boundary between the two liquid crystal domains and traversing the pixel electrode) and that the first and second dielectric frames correspond to sides of the second side electrode as well as the first and second side electrodes being electrically connected.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
